DETAILED ACTION

Specification

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The following title is suggested: Liquid crystal projector cooling system dependent on air pressure and temperature variables.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-3 are rejected under 35 U.S.C. 102(e) as being unpatentable by US Patent 6,322,218 to Sugawara et al.

In reference to claim 1, it can be seen from Sugawara's disclosure and figure 3, that he teaches a liquid crystal projector system with an internal temperature sensor (item 30), an air pressure sensor (item 32) and a control unit for controlling the number of revolutions of a cooling fan on the information provided from the two sensors (column 7, lines 65 – column 8, line 1 and column 8, lines 10-19).

In reference to claims 2 and 3, Sugawara discloses a projector system with a cooling fan driving circuit (figure 3, items 46) a table for storing the temperature and control voltage for the cooling fan (column 10, lines 55-64) at air pressures. The control voltage used to drive the cooling fan is determined using the values obtained from the air pressure and temperature sensors (figure 4 and column 8, lines 33-43).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ming-Hun Liu whose telephone number is 703-305-8488. The examiner can normally be reached on Mon-Fri.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Steve Saras can be reached on 703-305-9720. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-305-4750.
